For over 500 years, global empires have risen and fallen through the same financial cycle — from Portugal's Age of Discovery to Spain's silver empire, the Dutch golden age, Britain's industrial might, and now America's dollar dominance.
This documentary uncovers the hidden pattern of empire — how innovation builds wealth, debt destroys it, and every world reserve currency eventually faces the same reckoning.

From the silver mines of Potosí to the gold-backed British pound and the rise of the U.S. dollar at Bretton Woods, we trace the repeating cycle of global power, debt, and decline.
Today, with U.S. debt soaring and nations turning to BRICS, digital currencies, and de-dollarization, the question becomes urgent:
Is the dollar entering its final phase as the world's reserve currency — or about to reinvent itself again?

Discover how history, economics, and power intertwine — and what it means for your money, savings, and investments.
Because history doesn't just repeat; it rhymes in currency.

Subscribe to Finance Chronicles for more deep-dive documentaries on global finance, economic collapse, monetary history, and the future of money.
